

Preparing Your Home For the Future Webinar Now Available Online

The 'Preparing Your Home For the Future Webinar' is available online via the youtube link below. Dennis Hwang, a Coastal Hazard Mitigation Specialist with the University of Hawaii Sea Grant, provided a lot of great information to better understand the hazards of a hurricane and what you can do to retro-fit your home in preparation of a hurricane. It is too late when a tropical cyclone forms – so the best time to get prepared is right now since it has been fairly quiet in the East and Central Pacific zones.
